Dixith S Naik

Bengaluru, Karnataka, India | 8431188261 | dixithsnaik@gmail.com | LinkedIn | GitHub

Professional Summary

Full Stack & Backend Software Engineer with 1+ year of full-time production experience (plus 6-month SDE internship) building scalable **Python**, **Node.js**, and **React/Next.js** applications. Proven impact cutting API latency by **35%**, boosting backend throughput by **60%**, and lifting Lighthouse/PageSpeed scores (**60 → 90+**) across production systems.

Technical Skills

Backend & APIs: Python, FastAPI, Flask, Node.js, Express.js, Java, RESTful APIs, Microservices, Event-Driven Architecture
AI, Data & Observability: LLM, RAG, LangChain, Snowplow, Apache Superset, Apache Kafka, Redis, GitHub Copilot
Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), Angular, HTML5, CSS3, Tailwind CSS, Storybook
Cloud, Containers & Security: Docker, AWS (EC2, S3), Jenkins, GitHub Actions, Git, Jest, RBAC, OAuth 2.0, JWT
Databases: MySQL, MongoDB, Redis

Experience

Infosys — *Oct 2025 – Present*

Specialist Programmer — *Bengaluru, KA*

- Decreased API response latency by **35%** during high-load periods by decomposing monolithic **Java/Flask** services into **Python (FastAPI)** and **Node.js** microservices and offloading payload-heavy transfers to **AWS S3** asynchronous pipelines.
- Accelerated production troubleshooting and root-cause analysis by instrumenting real-time **Snowplow** telemetry tracking and building operational monitoring dashboards in **Apache Superset**.
- Secured enterprise data pipelines with zero unauthorized access incidents by implementing strict **Role-Based Access Control (RBAC)** policies across automated API and data-retrieval workflows.
- Cut production defects by **40%** and improved deployment reliability by integrating **Jest** unit testing, **GitHub Actions** pull-request validation, **Docker** containers, and **Jenkins** CI/CD pipelines.

MediBuddy — *Jan 2025 – Jul 2025*

Software Development Engineer Intern — *Bengaluru, KA*

- Shipped a production Vision Care booking and monitoring system serving **thousands of daily active users** by building secure **React**, **Next.js**, and **Express.js** REST APIs.
- Increased backend throughput by **60%** during peak ordering hours by identifying bottlenecks and introducing **Redis**-based caching across order-state and user-session endpoints.
- Raised Lighthouse/PageSpeed scores from **60 to 90+** and improved Core Web Vitals (**LCP by 54% / 2.8s → 1.3s**, **FCP by 68% / 1.9s → 0.6s**) by migrating legacy **Angular** modules to **Next.js** with lazy loading and asset compression.

Projects

Property Vault – Verified Real Estate Transaction Platform — *Aug 2026*

Stack: Python, Flask, React, MySQL, Razorpay API, Docker, Git

- Engineered a full-stack direct-to-buyer real estate platform using **React** and **Flask**, designing a relational **MySQL** Property Passport data model to enforce legal checklists (Ownership, Tax, RERA) and selectively surface verified documents.
- Streamlined end-to-end transaction verification by integrating the **Razorpay** payment gateway for flat-fee verification workflows and containerizing services with **Docker** for isolated deployments.

Peerly – Real-Time Social Matching & Messaging Platform — *Nov 2024*

Stack: Node.js, Express.js, React, MongoDB, Redis, JWT, OAuth 2.0, Docker

- Sustained **99% uptime** across **48 REST API endpoints** by building a **Node.js**, **Express.js**, and **Redis** backend with custom rate-limiting algorithms, **JWT** auth with token refresh, and automated content filtering.
- Implemented a privacy-first double-blind matching engine using client-side cryptographic hashing alongside **OAuth 2.0** so unreciprocated user actions are never exposed to the server.

Education

JSS Science and Technology University — *Mysuru, Karnataka*

Bachelor of Engineering (B.E.) in Computer Science and Business Systems — *Aug 2021 – Jul 2025*

CGPA: 7.52/10 | **Leadership:** UI/UX Design Lead, CSI Club (Led design systems across engineering and product teams)
