Dixith S Naik

Bangalore, Karnataka, India | 8431188261 | dixithsnaik@gmail.com | LinkedIn | GitHub

Professional Summary

Software Engineer experienced in owning features end-to-end, solving complex engineering problems, and delivering reliable production systems. Focused on translating business requirements into scalable solutions, improving engineering workflows, and collaborating across teams to deliver measurable outcomes.

Technical Skills

Backend Engineering: Node.js, Express.js, Python, FastAPI, Java, RESTful APIs, Microservices
Frontend Engineering: React.js, Next.js, TypeScript, Angular, Tailwind CSS, Storybook
Databases & Messaging: MongoDB, MySQL, Redis, Apache Kafka, Relational Data Modeling
Security & Integrations: OAuth 2.0, JWT, RBAC, Razorpay API, Third-Party API Integration
Cloud & DevOps: AWS EC2, S3, Cloudflare, Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD
Testing & Architecture: Jest, Unit Testing, Nx Monorepo, Event-Driven Architecture, Cron Jobs, Code Reviews

Experience

Infosys *Oct 2025 – Present*
Specialist Programmer *Bangalore, KA*

- Reduced backend file-processing latency by **35%** by replacing Base64 file uploads through API request payloads with AWS S3-based storage, enabling FastAPI services to retrieve and process files directly from object storage.
- Strengthened enterprise application security by implementing **Role-Based Access Control (RBAC)** and access policies across backend services and automated data retrieval workflows.
- Automated pull-request test execution using **GitHub Actions**, SSH-based integration with cloud instances, and cron-triggered test suites for pull requests targeting the main branch.
- Streamlined CI/CD workflows using **Docker, Jenkins, and GitHub Actions**, improving test automation, deployment consistency, and development reliability.
- Implemented **Snowplow event tracking** to capture user journeys and behavioral analytics, and leveraged **Apache Superset** dashboards to investigate production issues, analyze usage patterns, and support data-driven debugging.

MediBuddy *Jan 2025 – Jul 2025*
Software Development Engineer Intern *Bangalore, KA*

- Built a production Vision Care booking system serving **thousands of daily active users** using React interfaces and Express.js REST APIs for healthcare workflows.
- Improved Google PageSpeed scores from **68 to 90+** through frontend rendering, asset delivery, and loading optimizations.
- Revamped legacy Angular modules with Next.js and validated reusable UI components through automated frontend testing.
- Established **Storybook** within the Nx monorepo, enabling consistent development, documentation, and reuse of UI components.
- Integrated **AWS S3** for asset and file storage and automated build and deployment workflows using **Jenkins CI/CD**.
- Reduced LCP from **2.8s to 1.3s** and FCP from **1.9s to 0.6s** through lazy loading, asset optimization, and render-blocking resource elimination.

Projects

Property Vault – Verified Real Estate Transaction Platform *Aug 2026*
Stack: Python, Flask, React, MySQL, Redis, Kafka, Razorpay API, Docker, Kubernetes, AWS EC2/S3, Cloudflare

- Engineered a full-stack real estate transaction platform enabling direct buyer-seller interactions through verified property information, RESTful APIs, and transaction workflows.
- **Property Passport Architecture:** Designed relational MySQL models for ownership, tax, and RERA verification, ensuring sensitive property documents are securely stored and selectively accessible to buyers.
- Integrated Razorpay payment APIs for flat-fee verification transactions and containerized application services using Docker for isolated, reliable deployments.

Peerly – Social Matching & Confessions Platform *Nov 2024*
Stack: Node.js, Express.js, MongoDB, React, Redis, Kafka, JWT, OAuth 2.0, Docker, Kubernetes, AWS EC2/S3, Cloudflare

- Developed a real-time matching platform with **48 REST API endpoints**, implementing consent-based profile access and secure information disclosure.
- **Double-Blind Matching Architecture:** Implemented client-side hashing to prevent unreciprocated likes from being exposed to the backend.
- Maintained **99% uptime** through custom rate-limiting algorithms, JWT authentication with token refresh, and automated content filtering.

Education

JSS Science and Technology University *Mysuru, Karnataka*
Bachelor of Engineering (B.E.) in Computer Science and Business Systems *Aug 2021 – Jul 2025*
CGPA: 7.52/10
