

Dixith S Naik

Bangalore, Karnataka, India | 8431188261 | dixithsnaik@gmail.com | linkedin.com/in/dixithsnaik | github.com/dixithsnaik

SKILLS & TECHNOLOGIES

Backend & APIs: Node.js, Express.js, Flask, REST API Design, Microservices, Java

Frontend: React.js, Next.js, TypeScript, Tailwind CSS

Data & Security: MongoDB, MySQL, Redis, JWT Auth, OAuth 2.0, Secure Data Handling

Cloud & Infra: Docker, Git, AWS (EC2, S3), Jenkins, Event-Driven Architecture, Jest Testing

EDUCATION

JSS Science and Technology University

Aug 2021 – Jul 2025

B.E. in Computer Science and Business Systems, CGPA: 7.52

Mysuru, KA

EXPERIENCE

Infosys

Oct 2025 – Present

Specialist Programmer

Bangalore, KA

- Decreased API response latency by **35%** during high-load periods by decomposing monolithic legacy **Java** and Flask services into highly available **Node.js** and **Express.js** microservices.
- **Secured enterprise data pipelines** for internal platforms by implementing strict RBAC and access controls, ensuring **zero data leaks** across automated retrieval workflows.
- **Cut production defects by 40%** over two quarters by driving a culture of rigorous **code reviews** and integrating **Jest** unit testing and Docker/Jenkins CI/CD pipelines.

MediBuddy

Jan 2025 – Jul 2025

Software Development Engineer Intern

Bangalore, KA

- Shipped a production Vision Care booking system handling thousands of daily active users by building secure **React** and Express.js REST APIs that safely process sensitive health information.
- Increased backend throughput by **60%** during peak ordering hours by identifying bottlenecks and introducing **Redis**-based caching to order-state and user-session endpoints.
- Raised platform accessibility score from 60 to 90+ (Lighthouse) by migrating legacy Angular modules to **Next.js** and validating UI components through automated frontend **testing**.
- Improved Core Web Vitals (LCP by 54%, FCP by 68%) by lazy-loading assets, eliminating render-blocking resources, and maintaining strict design consistency across an **Nx Monorepo**.

PROJECTS

Property Vault – Verified Real Estate Transaction Platform

Aug 2026

Stack: *Flask, React, MySQL, Razorpay API, Docker, Git*

- Engineered a secure full-stack real estate infrastructure using **React** and **Flask**, completely replacing traditional broker trust-layers with direct, verified buyer-seller interactions.
- **Property Passport Architecture:** Designed a robust relational data model in **MySQL** to process and enforce legal checklists (Ownership, Tax, RERA), ensuring sensitive property documents are securely stored and selectively surfaced to buyers.
- Streamlined the end-to-end transaction lifecycle by integrating the **Razorpay** gateway for flat-fee verification payments and containerizing the microservices with **Docker** to ensure isolated, reliable deployments.

Peerly – Social Matching & Confessions Platform

Nov 2024

Stack: *Node.js, Express.js, MongoDB, React, JWT, OAuth 2.0, Redis, Docker*

- Engineered a real-time matching engine handling 48 REST endpoints with secure data access, ensuring user profiles and private information remain hidden until explicit consent is granted.
- **Double-Blind Matching Architecture:** Implemented a privacy-first matching engine where user 'likes' are hashed client-side before transmission; the backend identifies mutual connections solely via hash collisions, ensuring unreciprocated likes are never exposed to the server.
- Enforced platform security and maintained **99% uptime** by building custom rate-limiting algorithms, JWT auth with token refresh, and an automated bad-word filtering pipeline.

LEADERSHIP

UI/UX Design Lead, CSI Club — Led design direction and visual standards for the university's computer science student body, collaborating across engineering and product functions.
